

Overview

Global Battery Metals Ltd is a Canadian mineral exploration and development company that focuses on acquiring, exploring, and developing minerals. The company's operations are primarily concentrated in Ireland, the United States, and Peru. Its portfolio includes the Lara Property, the Lithium King Property, and the North West Leinster Lithium Property. [1]

Global Battery Metals Ltd was founded in 2005 and is headquartered in Vancouver, Canada. The company was originally known as Redzone Resources Ltd but changed its name to Global Battery Metals Ltd in March 2019.[1]

Operations

Global Battery Metals Ltd owns many properties with significant mineral deposits. One of these properties is the Lara Property, a copper-molybdenum deposit located in Peru, approximately 40 km from the Pan American Highway and 400 km south of Lima. The Lara Property consists of three mineral concessions covering an area of 1,800 hectares.[2]

Another property owned by Global Battery Metals Ltd is the North West Leinster Lithium Property, located in southeast Ireland. This property is focused on the exploration of lithium mineralization. The North West Leinster Property covers over 15 prospecting licenses, known as the North-west Leinster Block, which have a total area of approximately 477.39 square kilometers. In addition to these properties, the company also owns the Lithium King Property, the Lapoile Lithium Project, the Sawyer Camp Property, and the Central Project.[2]

Lithium King (Lithium Project)

This project is situated 170km West of Salt Lake City along Highway 80. The company has a project located within the limits of the paleo Lake Bonneville. This lake was the largest Late Pleistocene paleolake in the Great Basin of western North America, was formed as a result of cooler temperatures leading to an increase in precipitation and a decrease in evaporation. During its highest level, Lake Bonneville covered much of western Utah and extended into present-day Idaho and Nevada. Prior to the formation of Lake Bonneville, there was a pluvial lake known as the Western Interior Seaway.[3]

Leinster Lithium Project

The North West Leinster Project is focused on the exploration for lithium in the north of the Leinster Massif in south-east Ireland. This project area is covered by 15 prospecting licenses, known as the North-west Leinster Block, which have a total area of 477.39 km². These prospecting licenses were granted to LRH Resources Limited in October 2018 and are valid for a period of six years from that date. The focus of the project is on the exploration of spodumene pegmatites, which are a type of lithium mineralization.[4]

Lara Property, Peru

The Lara Property is a mineral property owned by Global Battery Metals Ltd, located at moderate elevation in Peru, approximately 40 km from the Pan American Highway and 400 km south of Lima. It consists of three mineral concessions covering an area of 1,800 hectares.[5]

In 2010, Redzone, the company that later became Global Battery Metals Ltd, acquired the right to earn up to a 75% interest in the Lara Property through an option agreement with Lara Exploration Ltd. Under the terms of this agreement, Redzone agreed to spend \$2.5 million on exploration activities on the property and issue 850,000 Redzone common shares to Lara over a three-year period in order to earn an initial 55% interest in the property.[5]

Company News

Global Battery Metals Announces Possible Source Identification at North-West Leinster Lithium Project.[6]

Global Battery Metals Ltd has announced that it has completed a geochemical characterization survey on the Knockeen-Carriglead prospect at its North-West Leinster Lithium Project. This prospect may be the source of the six surface samples that were previously reported to have returned values of lithium oxide (Li₂O) ranging from 0.70% to 2.95%.[6]

Global Battery Metals Initiates Field Exploration Program on North-West Leinster Lithium Project.[7]

Global Battery Metals Ltd, an international mineral exploration and development company, has announced that field exploration work has begun on its North-West Leinster Lithium Project. The focus of this work is on the Prospecting License Area (PLA) 1597.[7]

Management

Key leaders of the company are: [8]

Michael Murphy, President and CEO, is the founder of Torex Gold, a billion dollar plus market cap gold producer.

Rebecca Moriarty, CFO, serves and supports clients in the natural resources sector.

Craig Roberts, Director, serving as the CEO of Newfound Gold (NFG-V) and a Director of Ethos Gold.

Cameron Bell, Director, brings over 30 years of experience as a geologist and exploration manager.

Jean-Philippe Paiement, Director, brings over 15 years of wide-ranging experience in mineral system modelling.

Alan F. Matthews, Director, has over 45 years of mining and exploration experience in the mineral industry. He has been a Director of Global Battery Metals Ltd since 2006.
